

## **Get Coffee**

*Main Success Scenario:*

1. Coffee drinker pulls the carafe
2. Coffee drinker gets a mug (cup)
3. Coffee drinker pours coffee into mug (cup)
4. Coffee drinker puts the carafe back

*Alternate Scenarios:*

- 3a If the carafe is or becomes empty, then the mug (cup) stops filling (this should be obvious)
- 3b If the coffee drinker continues to pour coffee into a mug that is full (at capacity), then the mug(cup) will not take in the extra coffee (the mug(cup) will overflow—again, should be obvious)
- 2a, 3c A coffee drinker can get more than one mug (in sequence) and continue to fill as fill mugs(cups) as long as there is coffee in the carafe (see *item 3a above*)
