

Start Feeder–Casual Format

Main Success Scenario

1. With the parameter file loaded the Data Feeder
 - (a) Transitions from no Data Generation Mode to Data Generation Mode
 - (b) Starts Data Generation as Specified by the Parameter file
2. Periodically generates data as specified by the Parameter file

Alternative Scenarios

- 1a If there is an error in loading the Parameter file, or no Parameter file is loaded, then the Data Feeder does not transition to Data Generation Mode
- 1b If an error occurs that disrupts the data generation then the Data Feeder transitions out of Data Generation Mode to No Data Generation Mode
- 1c If an error is generated outside of the Data Feeder that disrupts the data generation, then the Data Feeder transitions out of Data Generation Mode to No Data Generation Mode

Notes/Constraints

- 2a Technically, an addition to the Use Case and could be mentioned here
