

Monitor Rocket—Casual Format

Main Success Scenario

1. With the System running and the Flight Director previously inputting the Mission Parameters File (See *Use Case 1.1 Initialize Rocket*)
2. System periodically monitors each Stage in the System (See *Use Case 1.3.1 Monitor Stage*)
3. System returns monitored Stage Data to the Flight Director
4. System periodically monitors the Payload/Capsule (See *Use Case 1.3.2 Monitor Capsule*)
5. System returns the monitored Payload/Capsule Data to the Flight Director

Alternative Scenarios

- 2a. If Stage monitoring fails, then the System returns an error indicating Stage Monitoring has failed
- 3a. If any of the Stage data indicates an error, then the System returns Data indicating the error
- 4a. If Payload monitoring fails, then the System returns an error indicating Payload monitoring failed
- 5a. If the Payload data indicates an error, then the System returns the Data indicating the error

Notes/Constraints

- * Any error returned in the Data from either the Stages or the Payload will be due to either a measurement error of some kind or measurements out of range for the Stages/Payload dictated in Initialization
