

Initialize Engine—Casual Format

Main Success Scenario

1. With the System Running, the Flight Director enters the Mission Parameters File (See *Use Case 1: Initialize Launch*)
2. System finds the Engine Parameters File name and location
3. System goes to the Engine Parameters File location
4. System opens the Engine Parameters File
5. System reads the Engine Parameter File Data
6. For Each Engine, System Initializes the Engine Data with the data from the Engine Parameters File
7. System alerts the Stake Holders of the Engine Initialization

Alternative Scenarios

- 2a,3a If the System cannot find the location where the Engine Parameter File, then the System alerts the Flight Director of the Error: indicating an illegitimate file path
- 4a If the System cannot open the Engine Parameter File, then the System alerts the Flight Director
- 5a If the System cannot read the Engine Parameter File, the the System alerts the Flight Director

Note/Constraints

- 7a The System indirectly alerts the Stake Holders via an upward cascade of alerts/queries starting with the Stage Initialization (See Use Case 1.1.1 Initialize Stage)
