

Initialize Capsule–Casual Format

Main Success Scenario

1. With the System running, the Flight Director enters the Mission Parameters File (See *Use Case 1 Initialize Launch*)
2. System finds the Capsule Parameters File name and Location
3. System goes to the Capsule Parameters File locatiion
4. System opens the Capsule Parameters File
5. System reads the Capsule Parameters File
6. System initializes the Capsule Data with the appropriate Capsule Data read in from the Capsule Parameters File

Alternative Scenarios

- 2a,3a If the System cannot find the location where the Capsule Parameters File is located, then the System returns an Error to the Flight Director: indicating not a legitimate file path.
- 4a If the System cannot open the Capsule Parameters File, then the System returns an Error to the Flight Director: indicating unable to open the Capsule Parameters File.
- 5a If the System cannot read the Capsule Parameters File, then the System returns an Error to the Flight Director: indicating unable to read the Capsule Parameters File.

Notes/Constraints

- 6a The System indirectly alerts the Stake Holders via an upward cascade of alerts/queries (See *Use Case 1.1 Initialize Rocket*)
